

What is claimed is:

1. An interlabial pad having an appropriate size to contain an absorbent body which can absorb body fluid and to be pinched between labia without forcing, the interlabial pad comprising:

5 a pair of flap portions at each side edge portion of both sides of the interlabial pad which cover labia majora when the interlabial pad is worn,
 wherein the flap portion is provided with an adhesive portion on a skin contact face which contacts a skin of a wearer.

10 2. The interlabial pad according to claim 1,
 wherein the pair of flap portions is provided at a part of each side edge portion of the both sides of the interlabial pad or almost all parts of each side edge portion of the both sides of the interlabial pad.

15 3. The interlabial pad according to claim 1 or 2,
 wherein the interlabial pad comprises another pair of flap portions at each side edge portion of the both sides.

 4. The interlabial pad according to claims 1 or 2,
20 wherein the pair of flap portions is provided at a position biased towards either end portion in a longitudinal direction of the interlabial pad.

 5. The interlabial pad according to claim 1 or 2,
 wherein the flap portions are extensible at least partially.

25 6. The interlabial pad according to claim 1 or 2, the pad comprising:
 a water-permeable surface side sheet provided on a body side face; and

a water-impermeable back side sheet provided on an opposite side face to the body side face,

wherein the flap portions are composed of an extended part of the water-permeable surface side sheet, an extended part of the water-impermeable back side sheet, or equally extended parts of both the water-permeable surface side sheet and the water-impermeable back side sheet.

7. The interlabial pad according to claim 1 or 2, the pad comprising a mini-sheet piece which forms a finger insertion opening having a finger breadth opening secured and a finger insertion space continuing therefrom,

wherein the mini-sheet piece is attached to an opposite side face to a body side face of the interlabial pad.

8. The interlabial pad according to claim 1 or 2, comprising a mini-sheet piece attached to the interlabial pad,

wherein the mini-sheet piece having a length dimension longer than a lateral dimension of the interlabial pad is attached on the opposite side face to the body side face of the interlabial pad by crossing the interlabial pad in a lateral direction, and

wherein the pair of flap portions is formed by protrusion parts of the mini-sheet piece protruding from both side edges of the interlabial pad in the longitudinal direction.

9. The interlabial pad according to claim 8,

wherein the mini-sheet piece forms a finger insertion opening having a fingerbreadth opening between the mini-sheet piece and the opposite side face

to the body side face of the interlabial pad, and the finger inserting space continuing therefrom.

10. The interlabial pad according to claim 7, wherein the mini-sheet piece
5 is composed of a water-permeable sheet, a water-impermeable sheet, or a lamination of the water-permeable sheet and the water-impermeable sheet.

11. The interlabial pad according to claim 1 or 2,
wherein the adhesive portion provided on the flap portions has a
10 separation strength of 0.3 to 2.0 N and a shear strength of 0.5 to 15.0 N.

12. The interlabial pad according to claim 1 or 2, comprising a long convex area extending in a longitudinal direction on a body side face.

15 13. The interlabial pad according to claim 1 or 2,
wherein the interlabial pad is used with a sanitary napkin.

14. The interlabial pad according to claim 1 or 2,
wherein the interlabial pad comprises an interlabial pad for incontinence.

20 15. The interlabial pad according to claim 1 or 2,
wherein the interlabial pad comprises an interlabial pad for absorbing vaginal discharge.

25 16. A wrapping body composed of the interlabial pad as claimed in claim 1 or 2, the wrapping body comprising a wrapping container that contains the interlabial pad,

wherein the flap portions provided on the interlabial pad is temporarily fixed detachably to an inner face of the wrapping container.

17. A wrapping body composed of the interlabial pad as claimed in claim
5 7, the wrapping body comprising a wrapping container that wraps the interlabial pad,

wherein the flap portions provided on the interlabial pad are temporarily fixed detachably to an inner face of the wrapping container, and

wherein the interlabial pad is folded and contained such that the finger
10 insertion opening opens when the wrapping container is unsealed.

18. The wrapping body according to claim 16,

wherein the wrapping container comprises a series of wrapping sheets rolled so as to form an overlapped region which is overlapped by itself in a
15 portion of the series of wrapping sheets,

wherein the inner face to which the flap portions are temporarily fixed comprises an inner portion of a face having both side edges to form the overlapped portion.
